

Setup of Tailwind CSS in React Project

STEP-1-: CREATE A REACT APPLICATION USING BELOW COMMANDS

1. `npx create-react-app my-project`
2. `cd my-project`

STEP-2-: Come inside your react project folder open with **CMD** or **terminal**, type the below commands-:

1. `npm install -D tailwindcss@3`
2. `npx tailwindcss init`

STEP-3-: Come inside [tailwind.config.js](#) file replace your entire code with below code -:

```
module.exports = {
  content: [
    "./src/**/*.js,jsx,ts,tsx",
  ],
  theme: {
    extend: {},
  },
  plugins: [],
}
```

STEP-4-: Come Inside [index.css](#) file and write the below code -: on the top

```
@tailwind base;
@tailwind components;
@tailwind utilities;
```

STEP-5-: Run your react Application.
