

Implementation of Redux

Step-1-: Install below commands in your react project

1. npm install react-redux.
2. npm install @reduxjs/toolkit react-redux

Step2-: Come inside in **src folder**, create two folders-:

- a. Redux-: create one file that name should be **store.js**
- b. Slices-: create your all the slices.

Step-3-: Come inside [index.js](#)(entry point) and write the below thing.

<Provider store={write your store name}><App/></Provider>

Step-4-: Use your redux variable and functions in your component
